### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas S. Ferrill on 4/2/2008. The application has been amended as follows:

In the specification, delete the following sentence from paragraph [0058]: "A machine- readable medium includes any mechanism that provides (e.g., stores and/or transmits) information in a form readable by a machine (e.g., a computer)."

In claim 22:

An apparatus, comprising:

a first processor containing logic configured to test and repair two or more memories connected to the first processor;

a second processor containing logic configured to test and repair two or more memories connected to the second processor; and

a fuse box configured to store a concatenated repair signature that repairs the memories connected to the first processor as well as the memories connected to the

second processor, wherein the concatenated repair signature comprises a string of bits arranged as a plurality of fields one for each memory, for each memory having a defective cell the field consists of one or more bits that identify the memory followed by a plurality of bits being compressed that are the repair signature data for the memory, and for each memory with no defective memory cells the field consists of only one or more bits that identify the memory, and wherein the fuse box contains an amount of non-volatile fuses to provide actual repair capability for only a subset of all of the memories that share the fuse box.

In claim 33:

A machine readable medium that stores data and executable instructions representing an integrated circuit, which when executed by a machine to cause the machine to generate a representation of the integrated circuit including:

a first processor containing logic configured to test and repair two or more memories connected to ~~that~~the first processor;

a second processor containing logic configured to test and repair two or more memories connected to ~~that~~the second processor; and

a fuse box configured to store a concatenated repair signature that repairs the memories connected to the first processor as well as the memories connected to the second processor, wherein the concatenated repair signature comprises a string of bits arranged as a plurality of fields one for each memory, for each memory having a defective cell the field consists of one or more bits that identify the memory followed by
